

Why test portable gas detectors one by one, by one, by one, when you can test 4 at once?

Reduce testing time and gas usage with our portable MGC Docking Station.

You can keep testing your portable gas detectors one at a time or you can test them in no time when you use the ultra-reliable multi gas detectors from Gas Clip Technologies and our new Multi Gas Clip (MGC) portable or wall mountable docking station.

Test 4 units at a time, up to 12 per minute.

Our MGC Dock lets you bump test and calibrate 4 monitors at once for LEL, H₂S, CO and O₂. You can test up to 12 monitors in a minute, which saves time and reduces testing gas.

Accurately test and record all data for each monitor.

You name it and our MGC Dock accurately tests,

records and stores the information. It provides individual monitor event logs, firmware, unit configurations and, of course, bump/calibration logs. The robust 2-GB USB gives you the memory you need and a lithium ion battery that can perform hundreds of tests before it needs to be recharged.
