

RADIATION ALERT® Tactical Carrying Case

This tactical carrying case is custom designed for use with the Radiation Alert Ranger®, Monitor200, and Monitor1000EC. It was created for users whose operational needs are primarily in the field. The shell is carefully constructed using durable and lightweight KYDEX. Thermoplastic provides ample protection against the daily wear and tear encountered when wearing a holstered unit.

This versatile carrying case is also equipped with an adjustable tensioning clip, allowing the user to dial in the exact amount of pressure needed. This ensures that the instrument is securely seated in the holster while, at the same time, remaining easy to extract and re-insert. The Blade-Tech Tek-Lok belt clip is the industry standard when it comes to belt mounting solutions. Innovative and versatile, the adjustable Tek-Lok can accommodate up to a 2.25" belt as well as a multitude of mounting positions.

Smart design. Durable materials. This case is an excellent choice for anyone operating their Radiation Alert Ranger®, Monitor200, or Monitor1000EC in an uncontrolled environment.

Weight & Dimensions:

(All measurements are approximate. There may be slight variances from case to case.)

- Case only 0.04 lbs
- Case with Unit 1 lb
- Height 6" / 15.24cm
- Width 3.5" / 7.62cm
- Depth 3.5"

(Measurement for the depth is taken from the rear of the clip to the furthest point on the face of the holster)
